## **1. Introduction**

### **1.1 Background**

The Department of Defense (DoD) Continuous Acquisition and Life-Cycle Support (CALS) Test Network (AFCTN) is conducting tests of the military standard for the Automated Interchange of Technical Information, MIL-STD-1840A, and its companion suite of military specifications. The AFCTN is a DoD sponsored confederation of voluntary participants from industry and government managed by the Electronic Systems Center (ESC).

The primary objective of the AFCTN is to evaluate the effectiveness of the CALS standards for technical data interchange and to demonstrate the technical capabilities and operational suitability of those standards. Two general categories of tests are performed to evaluate the standards; formal and informal.

Formal tests are large comprehensive, which follow a written test plan, require specific authorization from the DoD, and may take months to prepare, execute, and report.

Informal tests are quick and short, used by the AFCTN technical staff, to broaden the testing base. They include representative samples of the many systems and applications used by AFCTN participants. They also allow the AFCTN staff to gain feedback from many industry and government interpretations of the standards, to increase the base of participation in the CALS initiative, and respond to the many requests for help that come from participants. Participants take part voluntarily, benefit by receiving an evaluation of their latest implementation (interpretation) of the standards, interact with the AFCTN technical staff, gain experience using the standards, and develop increased confidence in them. The results of informal tests are reported in Quick Short Test Reports (QSTRs) that briefly summarize the standard(s) tested, the hardware and software used, the nature of the test, and the results.

## 1.2 Purpose

The purpose of the informal test, reported in this QSTR, was to analyze Harris Corporation's interpretation and use of the CALS standards, in transferring technical Raster data. They were also evaluating two different tape writing utilities. Harris Corp. used its CALS Technical Data Interchange System to produce data, in accordance with the standards, and delivered it to the AFCTN technical staff on two 9-track magnetic tapes.

---

## 2. Test Parameters

**Test Plan:** AFCTB 93-036

**Date of Evaluation:** 15 April 1993

**Evaluator:** George Elwood  
Air Force CALS Test Bed  
Det 2 HQ ESC/ENCP  
4027 Colonel Glenn Hwy  
Suite 200  
Dayton OH 45431-1672

**Data Originator:** Duane A. Bishop  
Harris Corporation  
301 Washington Street  
Bellevue NE 68005-2558  
(402) 293-2558

**Data Description:** Technical Manual Test  
5 Document Declaration files  
9 Raster files

**Data Source System:**

1840 Tape

**HARDWARE**

Gateway 2000 486/33 TX-8

**Standards**

**Tested:**

MIL-STD-1840A

MIL-R-28002A

### **3. 1840A Analysis**

#### **3.1 External Packaging**

The tapes arrived at the Air Force CALS Test Bed (AFCTB) enclosed in a box in accordance with ASTM D 3951. The exterior of the box was not marked with the magnetic tape warning label, as required by MIL-STD-1840A, para. 5.3.1.3.

The tapes were enclosed in a barrier bag as required by MIL-STD-1840A, para. 5.3.1.2. Inspection of the tape reel showed the labels indicating the recording density, as required by MIL-STD-1840A, para. 5.3.1. Enclosed in the box was a packing list showing all files recorded on the tape.

#### **3.2 Transmission Envelope**

The 9-track tape received by the AFCTB contained MIL-STD-1840A files. The files were named per the standard conventions.

##### **3.2.1 Tape Formats**

Both tape one (VAX) and tape two (DOS) were run through the AFCTN Tapetool v1.2.8 utility. No errors were encountered while evaluating the contents of the tape labels on either tape.

##### **3.2.2 Declaration and Header Fields**

No errors were reported during the evaluation of the CALS Document Declaration file or data file headers of tape one (VAX).

On tape two, five errors were reported, one in each of the Document Declaration Files. The tape was written using the DOS Tapetool v1.2.8, which has a bug in the date function. The reported error has been corrected in the next release of Tapetool v1.2.9.

---

dtetrn: 7463

\*\*\* ERROR (MIL-STD-1840A; 5.1.1.2) - Invalid date format encountered.  
\*\*\* NOTE (MIL-STD-1840A; 5.1.1.2) - Date Format shall be a four digit year followed by a two digit month followed by a two digit day.

The physical structure of tape one (VAX) meets the CALS MIL-STD-1840A requirements. The physical structure of tape two (DOS) has an error which causes it not to meet the requirements.

#### **4. IGES Analysis**

No Initial Graphics Exchange Specification (IGES) files were included on this tape.

#### **5. SGML Analysis**

No Standard Generalized Markup Language (SGML) files were included on the tape.

#### **6. Raster Analysis**

The Raster files from tape one (VAX) were evaluated using the AFCTN *validg4* utility with no errors reported. The files were read into the AFCTN *calstb.475* viewing utility and displayed without a problem.

The files from tape two (DOS) were evaluated using the AFCTN *validg4* utility. All of the files were reported as being in error. The files could not be read into the AFCTN *calstb.475* viewing utility. The errors were traced to missing EOF markers. The DOS *Tapetool v1.2.8* did not pad the end of the Raster files causing these errors.

The AFCTB has several tools for viewing Raster files. These tools are not used to generate a pass/fail but to report how commercially available software can handle the files. Many of these products are used in the development of technical publications and are good indicators of usability. The use

---

of these products is not an endorsement nor an indication of CALS capability. All operations were performed using the default settings.

The files from tape one were converted using Arbortext's *g42tiff* utility and read into Island Graphics' *IslandPaint* without a problem.

The files were read into IDA's *IGESView* and displayed without a problem. Two hard copies were made and are included in the Appendix of this report.

The files were converted using Inset Systems' *HiJaak for DOS* and imported into Corel's *Ventura Publisher* without a reported problem. All of the files were printed and are included in the Appendix of this report.

The Raster files from tape one (VAX) meet the CALS MIL-R-28002A specification. The Raster files from tape two (DOS) do not meet the CALS MIL-R-28002A specification.

## **7. CGM Analysis**

No Computer Graphics Metafile (CGM) files were included on the tape.

## 8. Conclusions and Recommendations

In summary, the physical structure of tape one (VAX), from Harris Corporation, was correct and meets the CALS MIL-STD-1840A requirements. Tape two (DOS) had reported errors in all Document Declaration files, which was caused by the tape writing utility; therefore, it does not meet the requirements.

The Raster files on tape one (VAX) meet the CALS MIL-R-28002A specification. The Raster files on tape two (DOS) do not meet the CALS MIL-R-28002A specification, because of errors introduced during the writing of the tape.

Tape one (VAX) meets the CALS MIL-STD-1840A requirements.

Tape two (DOS) does not meet the CALS MIL-STD-1840A requirements.

## 10.1.2 D001R002

### 1.0 SCOPE

1.1 This specification establishes the requirements for wire wrap panels for mounting microcircuits.

### 2.0 APPLICABLE DOCUMENTS

2.1 Unless otherwise specified, the documents of the issue in effect on the date of purchase shall be the invoked issues, to the extent specified herein. Where conflict occurs between these documents and this specification, this specification shall apply.

#### Specifications

##### Federal:

|          |   |
|----------|---|
| QQ-N-290 | Nickel Plating  |
| QQ-C-533 | Copper-Beryllium Alloy Strip  |
| QQ-B-626 | Brass, Lead and Nonlead Rod, Shapes, Forgings, and Flat Product With Flat Finished Edges. |

##### Military:

|             |   |
|-------------|---|
| MIL-T-10727 | Tin Plating, Electrodeposited or Hot Dipped for Ferrous and Nonferrous Metals |
| MIL-1-45208 | Inspection System Requirements  |

#### Standards

|             |   |
|-------------|---|
| MIL-STD-105 | Sampling Procedures and Tables for Inspection by Attributes |
| MIL-STD-130 | Identification Marking of U.S. Military Property            |

#### Industry:

|             |   |
|-------------|---|
| IPC MIL-910 | Design and End Production Specification for Rigid Multilayer Printed Boards |
|-------------|---|

### 3.0 REQUIREMENTS

#### 3.1 Mechanical.

3.1.1 Outline and Dimensions. The outline and dimensions shall be as specified in Figure 1.

3.1.2 Material. The material shall be as follows.

- a) Panel: Two (2) ounce copper glassy epoxy laminate, 4 layer multilayer in accordance with IPL-MIL-910, Class 1 requirements, .125 thick in microcircuit field, .062 thick in edge connector field and mounting sides
- b) Sockets: Body, brass half hard in accordance with QQ-B-626, contact, beryllium copper in accordance with QQ-C-533.
- c) Card Ejector: Plastic, commercial (Nylon 6/6).

|   |          |                |        |
|---|----------|----------------|--------|
| <b>HARRIS CORPORATION</b><br>Government Information<br>Systems Division<br>Melbourne, Florida 32901 | SIZE     | CODE IDENT NO. | REV    |
|   | <b>A</b> | <b>64755</b>   | 170078 |
| SCALE   |          | SHEET          | 2      |

400973-2K

### 10.1.3 D001R003

- 3.1.3 Finish. The finishes shall be as follows:
- a) Panel Plane: Tin plate in accordance with MIL-T-10727, connector fingers, gold plate over nickel plate.
  - b) Sockets: Gold plate in accordance with MIL-G-45204, 0.00005 inch thick minimum over nickel plate in accordance with QQ-N-290.
- 3.1.4 Marking. Parts or packages shall be marked with the manufacturer's name or symbol and part number as a minimum in accordance with MIL-STD-130.
- 3.2 Workmanship. Workmanship shall be of a sufficiently high grade to insure that printed circuit boards are of uniform quality and free from burrs, slivers, sharp edges, or other defects which would affect their service life and shall be uniform in appearance.
- 3.3 Environmental. The parts shall be capable of meeting the following environments without degradation.
- 3.3.1 Temperature Range
- Operating: 0°C to +50°
  - Non-operating: -40°C to +75°C
- 3.3.2 Fungus. Materials shall be fungus-inert (non-nutrient).
- 3.3.3 Humidity/Moisture Resistance. Hardware shall show no evidence of physical degradation in an environment of 95% relative humidity including condensation caused by temperature variations.
- 3.3.4 Salt Spray. Hardware shall show no evidence of physical deterioration when exposed to a salt-laden atmosphere as might be encountered during service in a coastal environment.
- 3.3.5 Shock/Vibration. Hardware shall be capable of sustaining normal unabsorbed stress resulting from shipping, installation, or maintenance handling.
- 3.3.6 Altitude.
- Operating: Sea-Level to 10,000 feet
  - Non-operating: Sea-level to 50,000 feet

|   |      |                |        |     |
